• **Case 1:** A 45-year-old male with a long history of alcohol abuse presents with a 2-week history of increasing fatigue, weight loss, and abdominal pain. He has a history of chronic liver disease and is currently on no medications. Physical examination reveals a jaundiced patient with a palpable, tender, and enlarged liver. Laboratory tests show a total bilirubin of 3.5 mg/dL, aspartate aminotransferase (AST) of 150 U/L, and alanine aminotransferase (ALT) of 180 U/L. A CT scan of the abdomen shows a large, heterogeneous mass in the right lobe of the liver. What is the most likely diagnosis?
